

FOR IMMEDIATE RELEASE

CURB SYSTEM ENHANCED FOR MORE VERSATILITY TYGAR Introduces the All New BENGAL TG1000 XL Curb Machine

January 2011 - TYGAR Manufacturing™, LLC, the leading provider of landscape curbing equipment, is taking its' #1 best-selling curbing machine in the world to new heights by introducing the next generation Bengal curb machine, the TG1000 XL.

The Bengal has been significantly enhanced to provide more strength, longevity and more choices in curb shapes, resulting in a greater value to curb contractors. The Bengal has been substantially improved with the first-ever integrated cabling system, a new & improved hopper liner, and a larger number of standard mold shapes.

“Because TYGAR’s CurbCable System is now integrated into the machine’s design, contractors can more readily increase the strength of any curbing job without having to attach a separate apparatus, like with other machines, “ said Clifton Dodge, sales manager of TYGAR.

While TYGAR’s original model was the first to include a durable poly plastic liner for the hopper, TYGAR’s new and improved liner is designed to provide even greater functionality to the extrusion and clean-up process. By adding a 6x4 round cap mold along with TYGAR’s three other standard molds, the Bengal now has more shapes to offer than any other standard curb machine on the market. In addition to the increased functionality of the Bengal XL, the machine is still the only machine with the versatility to produce over 30 different stamp patterns, 25 distinct curb shapes, 24” walkways, and curbs with accent lighting.

“With one-day installs and tremendous versatility, **TYGAR’s** innovative new system is sure to be a great profit generator for contractors,” said Crosswell.

Last year, TYGAR introduced CurbCable, which has proved effective as a method of embedding steel cable into landscape curbing. As a standard feature on the new Bengal XL, the system is totally seamless as it extrudes a braided galvanized cable into concrete curbs in order to provide strength and longevity to any curbing project. The product is especially popular in northern climates, where TYGAR’s system fully mitigates any possible adverse impact from freezing and thawing. Used along with TYGAR’s special additives, the CurbCable system virtually eliminates the threat of separation or deterioration in landscape curbing.

TYGAR’s turnkey curbing systems provide contractors with the most innovative and versatile equipment and products available for landscape curbing. For complete info package and DVD on the curbing business, call **1-888-EZ-TYGAR** or go to www.tygarmfg.com.
