

**FOR IMMEDIATE RELEASE**

## **STRONGER CURBING PRODUCTS WITHSTAND COLD CLIMATE EXTREMES**

### **TYGAR Manufacturing's Weather-Buster System proves strongest in industry**

**January 1, 2011** – As the market leader of concrete curbing equipment in the northern extremes of Canada and the United States, **TYGAR Manufacturing, LLC**, knows first-hand how to stand up to Old Man Winter. With a decade-long presence in such climates as Northern Alberta and Saskatchewan, the Rocky Mountain States, and New England, TYGAR has invested years into developing the industry's only Weather-Buster system proven to strengthen curbing in the coldest and harshest of climates.

“We’ve provided additional strength to concrete in three ways,” said Clifton Dodge, sales manager of TYGAR. “By developing proprietary additives, designing the CurbCable system for running a galvanized cable through curbing, and training our curbing contractors to mix formulas stronger than industry standards, we have eliminated the adverse impact of freezing and thawing.”

TYGAR’s proprietary additive called TYGARFiber is a synthetic nylon-blended fiber that provides substantial bonding integrity to curbing, without the unseemly effect often found with other poly-based fibers. To further ensure longevity, TYGAR’s CurbCable System, now a standard feature on TYGAR’s Bengal TG1000 XL Curb Machine, provides a seamless way to extrude a 1/8’ galvanized and braided cable into the centre and length of concrete curbing. “The internal strength created by the CurbCable virtually eliminates the threat of separation or deterioration in landscape curbing,” said Mr. Dodge.

Lastly, during TYGAR’s certified training course, curbing contractors are provided with unique formulas for stronger curbing mixtures that increase PSI (lbs. per sq. inch) based on the specific application. As a result of these combined practices, TYGAR’s Weather-Buster System has proven to produce the strongest curbing available in the market.

“With TYGAR’s system, we have been able to ensure our clients that our curbing lasts without cracking and that it is a long-term home investment,” said Craig Cochran of GreenThumb Curbing in Medicine Hat, Alberta, where winter temperatures reach well below zero. “We’ve been able to successfully run all types of curbing for years without any major issues.”

“Because our additives, CurbCable System, and training practices are so proven, TYGAR has become the market leader in all of North America, and especially the northern states and Canadian provinces” said Clifton Dodge, sales manager of TYGAR.

**TYGAR’s** turnkey curbing systems provide contractors with the most innovative and versatile equipment and products available for landscape curbing. For complete info package and DVD on the curbing business, call **1-888-EZ-TYGAR** or go to [www.tygarmfg.com](http://www.tygarmfg.com).
